

Rig and Focus plan for NYDCS 'Maelstrom'

Floor

	Profile, wide enough to produce the shape directly below it.
	Fresnel
	Fresnel on bench stand or soft focus mid on booms

Stage 10m by 10m
Full black box
Haze

Gaps between approx 20cm

All rectangles in sharp and soft options.

For reference Add F for soft shape reference. ie 7F is USL.

Please leave the dancers subtle corner marks for 1, 6, 7, 8, 9

I found the best way to mark up for a focus was to mark up a cross CS. +
Mark the distances along these.

Join up the marks to create the 1.5m and 5m diamond.
Use the 1.41m marks and make another diamond but run out to the 5m line.
This should be enough to focus to.

All overhead profiles focused to sharp edge to the shapes.
Drop LEE 253 frost into half for a soft and hard focus option.

Any question please do get in touch.
